Category: #Microsoft#Q: I would like to copy files from a specific group in a single directory. How do I go about this? I have directories with two subdirectories: 1. 0 and 2. 1. I would like to copy files from 2. 1 into 0 (keeping the directory structure intact). I've tried looking at "find" but I don't really understand it. I'm looking to know if there's a way to do this by using "find" or perhaps using "cp" or another method. I think "find" is a bit confusing to me and I'm having a bit of trouble with understanding how I could use it in this instance to make it work. If "find" is the way to go about this, is it possible to do this with "find" in the command line or do I have to have a program with "find" implemented? A: Files have parents, in your case you have directories 1 and 0 and 2, so you can do this in two phases. First stage (if you have only one directory): find 1 -type f -delete find 2 -type f -delete Otherwise, you will have to loop over all directories one by one and delete files at the same time: \$ find 1 -type f -delete \$ find 2 -type f -delete \$ for d in 1 0 2; do find "\$d" -type f -delete; done Second stage (if you have more than one directory): cp -a "\$d"/\* "\$d" This will recursively copy files from the given directory to the same directory and strip all. and.. files. Q: Computation of the curvature of a surface with non-zero Gaussian curvature I want to compute the Gaussian curvature of a surface  $S$  in  $\mathbb{R}^3$  given by:  $S = \{(x,y,f(x)) \in \mathbb{R}^3 : (x,y) \in \Omega\}$   $\Omega = \{(x,y) \in \mathbb{R}^2 : x^2 + y^2$
