I've had a long time unsubscribers to this site. There have been changes in the last two years. I have lost some readers as well as I've gained others. I have loved working on a site dedicated to photographers and their hobby of photography. Now we must turn our efforts to other types of illnesses affecting us as humans. I do miss many people and the fun times we have had here. I'm going to try and keep up a larger number of articles this year and although this is not a "photography only" site, I will keep it that way. This year I've made a commitment to myself to publish each week. I will keep going even if there are very few readers. If I reach out to my old readers and ask to be included asking for help on our subreddit would be a start. I've read a lot of blog posts this year and I am sure they look at writing as a chore, much like the writer to a website. To me though, writing is just as important as taking a photograph. When one is thinking of whether or not to upgrade to Lightroom 5, it is always good to speak to someone who has been using the older versions. I have been using Lightroom 4 since it was released. I was eager to see what Lightroom 5 has to offer and was pleasantly surprised. I will not hit the high points of the new features, but will share my thoughts and experiences because these features definitely make working more than a little easier and could make a difference in your workflow. First thing I noticed about **Lightroom**, which I consider to be the successor to Photoshop Lightroom, is its **app name**. I thought that Lightroom would be a word for a tool that does not take much space on my laptop. Even though **Adobe Lightroom** is the downloaded file name, the application name is "Lightroom". As I was already used to that user-friendly name I just went with "Lightroom."

The Magic Wand Tool and the Quick Selection tools let you isolate large regions of your photos, while the Gradient Tool lets you create gradients from colors, styles, or strokes on linked objects. The Eraser tool erases unwanted objects and colors, and lets you use shape-based selections to remove unwanted areas of your image. You can work inside Selections to add or replace existing content, and then export the results. Point and click tools are also included, including pencil, brush, and gradient tools for making quick selections and adding adjustments. There are also classic type tools, including Type, Canvas, and Create a Type Tool, to let you draw or type within selected areas. The Healing Brush can use optical corrections like the Smart Healing tool to repair small, linear

errors, and the Patch tool lets you select samples of your area to use to improve areas of your image. Similar to the Healing Brush, the Paint Bucket lets you spread color to fill objects.
