Adobe Photoshop CC 2017 is probably the most recent version of the software. It's one of the best photo editing software and comes with a large number of new features and tools. The software compresses a lot of data and works on all kinds of photos, JPEG and RAW and gives you unmatched speed and easy interface. Over the past few years, the 3D and 3D renderer library in-camera had become markedly complex, and maintenance was becoming costly relative to the benefits generated. Adding to this had been the move to add native capabilities for a range of new technology, including VR, AR, AI and other new opportunities for designers and creative professionals. Photoshop is my go-to program for photo and illustration editing. The UI is so ergonomically designed that it's second nature to use. Even as a Mac native, I can push my program aside when I need to. This is where Adobe's huge library of essential tool palettes—including Camera RAW, Photoshop's own toolkit, and the new Styles and Clipping tool palette—come in handy. The Photoshop paper template has a selection of grungy textured backgrounds, and a built-in Brushes proxy layer to take Photoshop's built-in tools and apply them to your images. You can then play around with the styles, to get exactly the look you want. Photo Story's innovative new photo story template offers a simple, clean design and a great color palette. With the new Photo Story template, photo editing is easy and fun. The new template also comes with a built-in filter and lens adjustment tool that makes creating your best pictures a process that takes seconds rather than minutes.

Adobe in April *first* announced Photoshop on the web and Illustrator on the web. In its MAX keynote, which debuted both apps, Adobe said that more web-based G suite apps are coming, including Marvel, Office and Snapchat. This could include Photoshop. The company has said that the browser-based app should be available in "early 2019." "Working on the web is becoming an important part of Adobe's work. Laptop and smartphone screens are rapidly overtaking traditional monitors as the primary point of work," said Matt Bencivenga, head of Creative Cloud, Adobe. "When you're working on the web, you want to be able to do more than just design. You want to create rich content that engages your audiences using the tools you know and trust. With these browser-based apps, we're fulfilling that need. The Collect feature in Photoshop and the web will make it easier to create and share large, cohesive assets, and I expect to see the same for the rest of our new apps."
