Adobe's Creative Suite is a large collection of creative software that includes:

- Adobe InDesign
- Adobe Photoshop
- Adobe Illustrator
- Adobe After Effects
- Adobe Flash

It's the most popular suite of software, and it's been around since the early 1990's. It has expanded over the years, and the latest version is CS6. Adobe started providing a free personal version of the software called Creative Cloud. This allows anyone to have access to CS6 software for up to a year. The software can be installed on the computers they use, or they can download the software to access the tools offline. The software is updated regularly to provide new features and fixes.

Save time while looking for a particular section of a photo that needs color correction: Photoshop's Auto Fix feature considers a number of different fixations within the image's layers, including Exposure, Contrast, Color, and Sharpening. You can adjust individual color settings using the Visualize button or the Multichannel and Tonal tabs. Optimize images for mobile display with the two collections of picture presets that you can add to your web pages or embed on social media sites. Mastering Flashlight is meant as a tool for webmasters to quickly create new themes for their sites. SmoothWIX Themes is the easy way to create fully-featured websites. 4SF.com is impressed with Response —a remarkable type and grid system. It's like letterpress, but instead of having a wood or metal plate you stamp your document or design sheet, you have a wood or carbonless sheets of paper that you feed into your printer. This type of printing, which dates back to the 1840s in the United States, is now more commonly known as "zines." Photoshop is one of the most common programs used for designing forms. This course teaches how to create attractive fillable, responsive forms in Photoshop. It starts with beginner tutorials and goes all the way to expertise with Auto Link Code. You'll learn the basics of shapes and paths to create a form with a gradient fill and then learn how to link code to make a fluid form. You'll also learn a variety of tricks to scale a form properly. The course concludes with advanced techniques for creating responsive forms using CSS (for web-based forms) and React (for forms that work within a website).*
