ABOVE: This shows main interface icons. **BELOW:** A sample of what an image looks like in an open folder from Photoshop Elements. Importing and archiving are the focus area here, with the best way to use the tool is through the use of a canvas. I must admit that I appreciated that you showed the difference in speed between Lightroom 5.2 and previous versions (especially in the previous versions). I still think the only option for most people would be to stay with the previous version or wait for the future versions to be released. Especially since I do not think, that the interface has any significant changes at all. However, the fact that you go through the trouble to open the oldest version of Lightroom (6.1) together with the latest version (5.2), shows that your focus lies in the speed and not in creating a new interface. When I started with photography in the 80s I used Minolta and Nikon cameras. When the darkroom was the death of developers, the photo session was the start of the workflow. I used every available Adobe product (I might have still had an inferior copy of Photoshop 2.0). As I am sure you know, we moved to Lightroom for digital photography. The basic editing in LR (version 1 and 2) was fast and easy. Then came Cheetah and then Digital Darkroom - and now we have Elements and InDesign. If we take a look at Adobe products, they seem to change a lot. Are there any thoughts as to why Adobe is creating these confusing and very expensive programs? Nothing beats a developer's approach. Do they all need to be in the same product? It is very confusing. We need to see what they are good for. For example, Adobe has made a lot of hype about their new camera's with terabytes of memory? Well that's fine - but do they need a whole product for it? Photoshop Elements offers a very basic photo editor and a few other features. I think the whole idea is a distraction. Lightroom is great and very useful. However, the next version (>4), it seems to be troublesome. They might lose visitors.

It happens to everyone at one point in time. Maybe you are bored with that new software and need to replace it. Maybe you want to learn a new option for your workflow or a better way to get your

content out there. Whatever your reason is, we have you covered: In a similar theme to the new feature releases, Adobe is launching an exciting new photo sharing service called Photoshop Match, available to all desktop, tablet and smartphone users. With the help of this new service, you can now browse and save to your photo library, on the web or from your mobile device using just a few taps. That's not all, though. There are a variety of new features in the pipeline, such as the Upright feature, where you can easily and intuitively resize, rotate or turn photos vertically or horizontally. There's also a new Advanced Retouching feature, which is aimed to give you the best of Photoshop and Photoshop itself. Furthermore, the Master Collection version of Photoshop Elements 15 will be rolling out in 2020, and includes a new feature called Albums Captions, as well as a refreshed, faster and more intuitive user interface. Even more excitingly, the Elements App will be transformed by new features in forthcoming releases, such as Cara Editor, which lets you edit RAW files on your smartphone or tablet. Of course, for those that don't want to pay, Adobe has also introduced a free version of Photoshop on Windows—released on April 25, 2020. This free software is available to anyone on any platform, and will let you change many of the simple to edit, earlier-released features.
