Removing areas with reflection or the light source in an image is an essential part of the Photoshop workflow. Once you've removed the light, you can then change the tonality of the image around the area. Some of the techniques that can be hard to learn are commonly used designing ideas such as creating a background that appears to be floating. It's usually much easier to learn how to do these things when you are designing your own images, rather than producing images for clients to use. That's why it's important to find a mentor or fellow designer or even a tutor and get your questions answered.
